

Pizza Manager

- Billing & Item Management

Documentation

Frontend: React.js.

Backend: Go (Golang).

Database: MySQL.

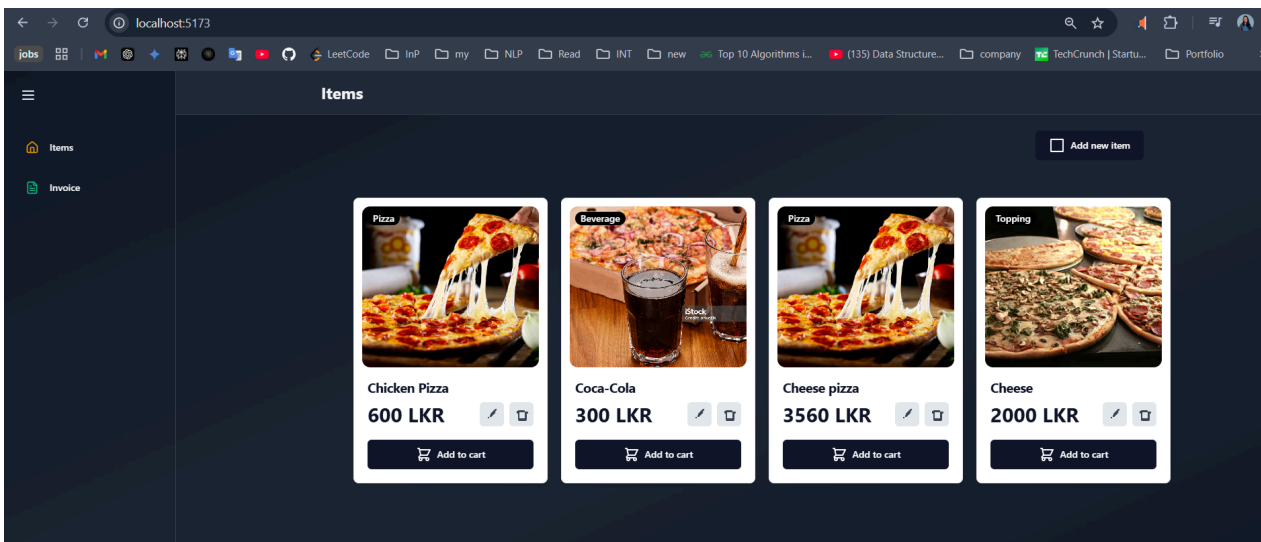

Architecture: MVC (Model-View-Controller) pattern.

Ensured responsive design and adhere to UI/UX best practices:

Used React.js with MUI & Tailwind CSS.

Item Management

- Assumed an **admin/manager role** as the **primary user** for the features
 - Item Name (e.g., Margherita Pizza, Coke)
 - Category (e.g., Pizza, Topping, Beverage)
 - Price

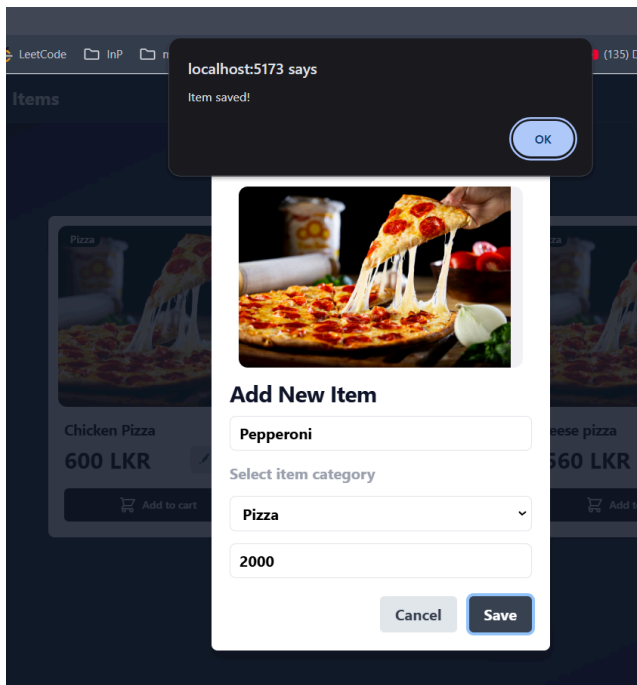

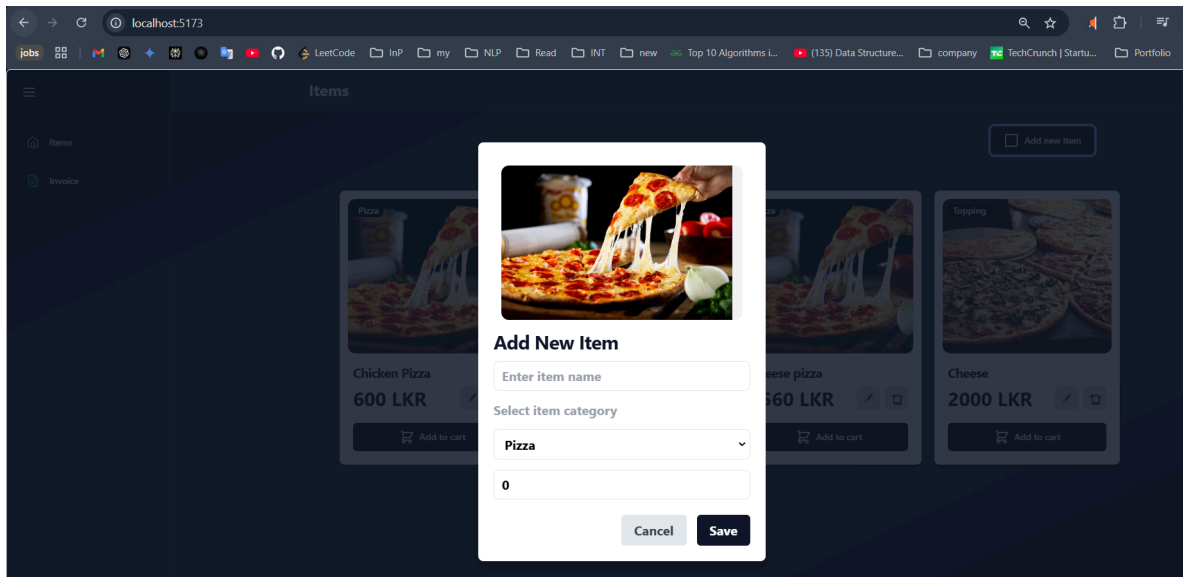

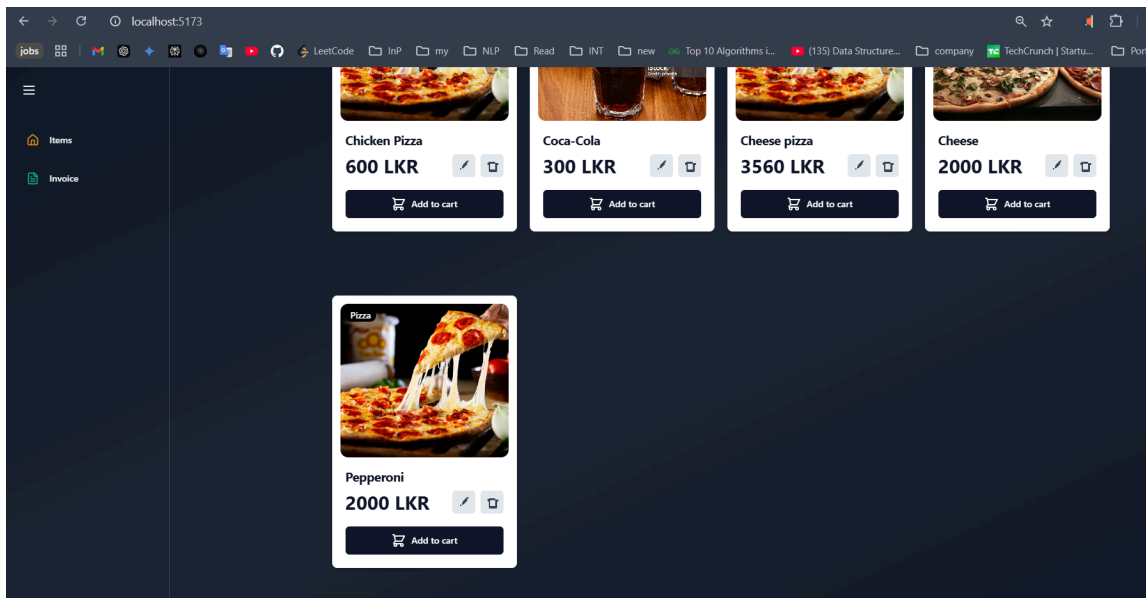

Functionalities

- CRUD Operations for Items:

Create:

Add new items (Any items from pizza, toppings, beverages).

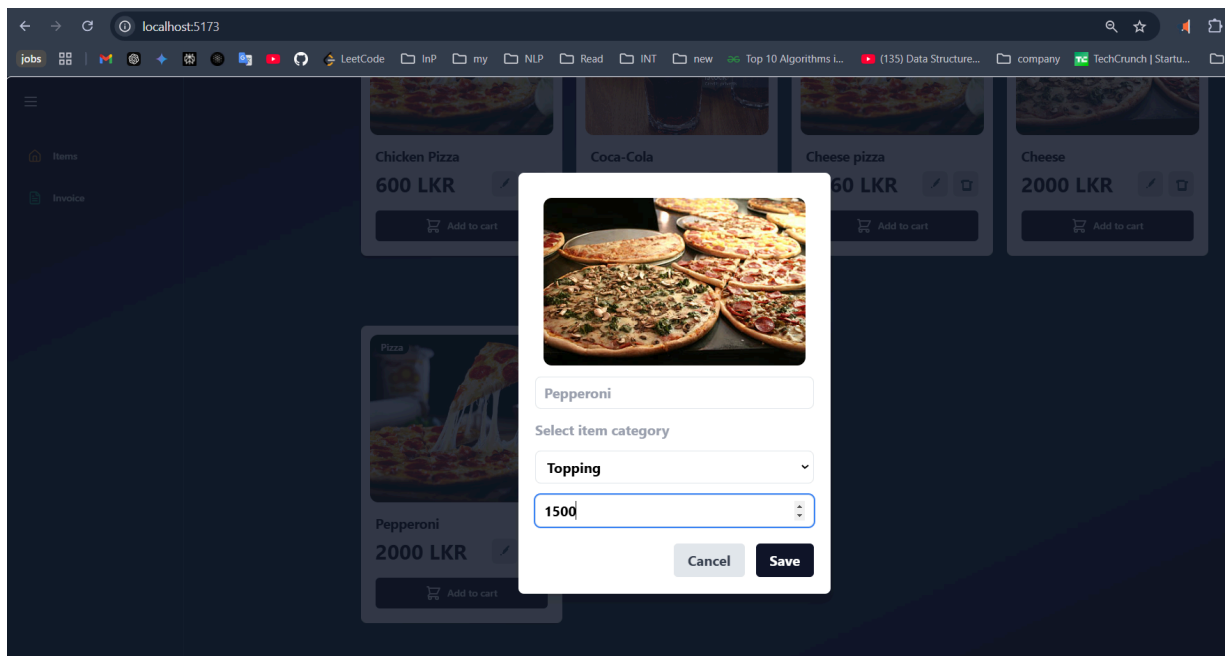

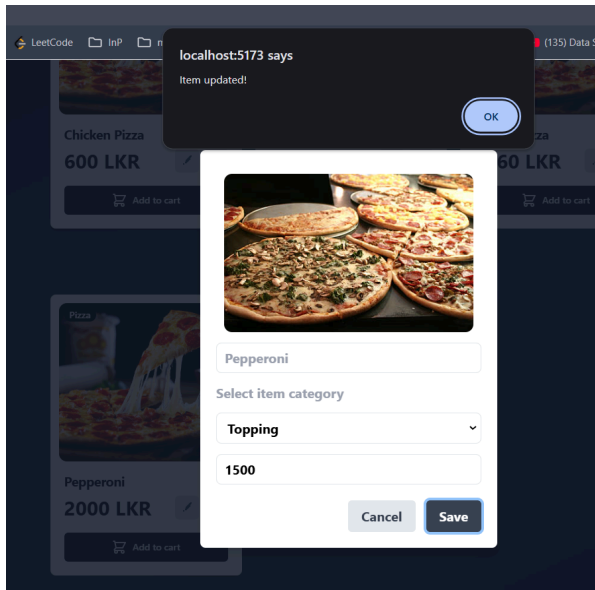

Read:

Display items through a card-based layout.

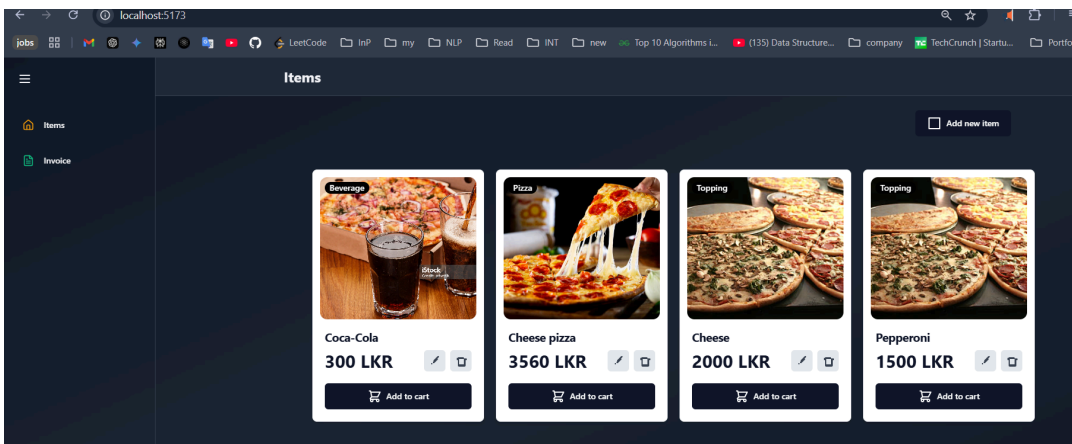

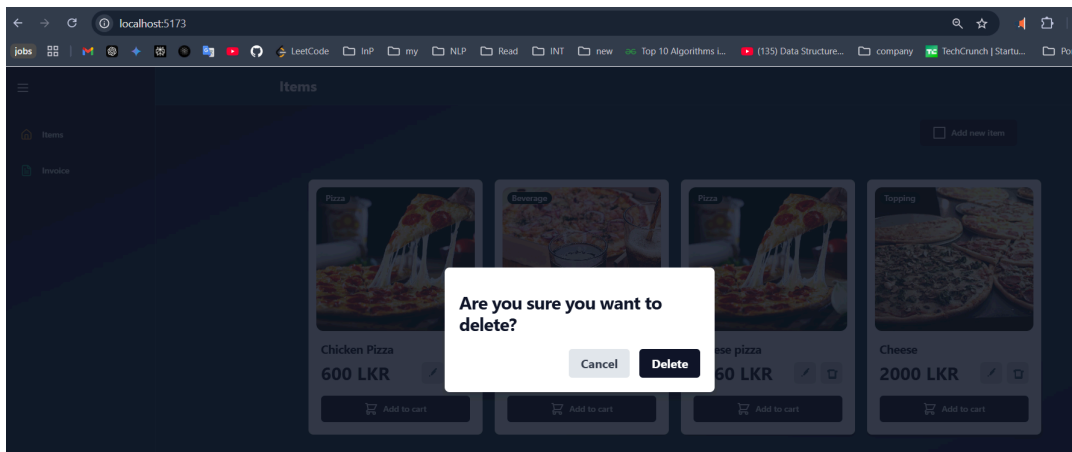

With features of Item Name, Category, Price, Actions (Edit/Delete)

Update: Edit item details.

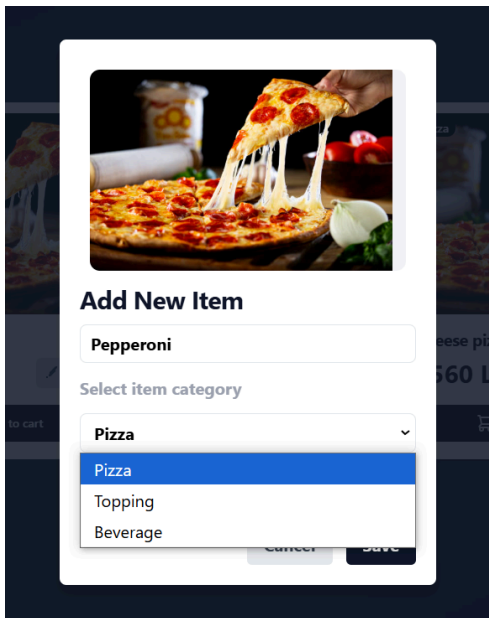

Delete: Remove items.

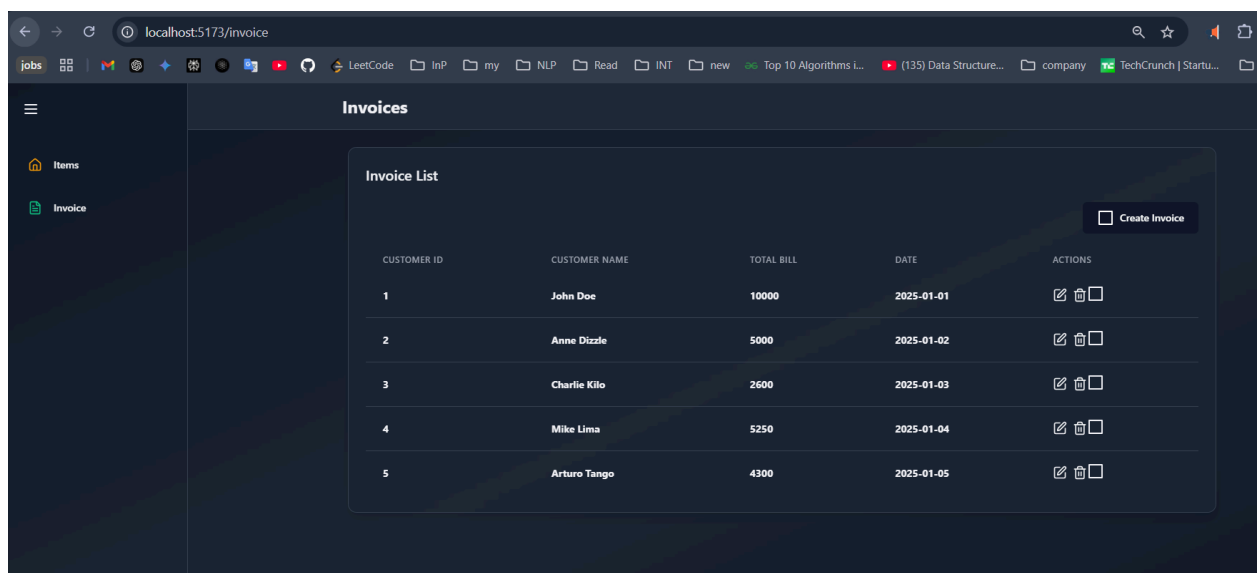

- Can see Chicken pizza (selected item) is deleted

Categorization

- Pizza Types / Toppings / Beverages
- Dropdown added for each to sort/display items by category

Invoice/ Bill Management

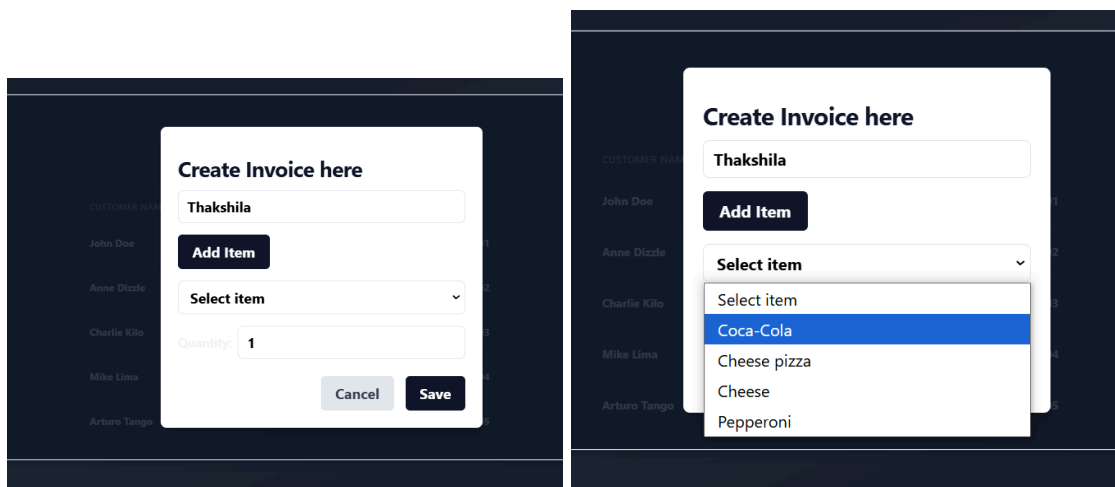

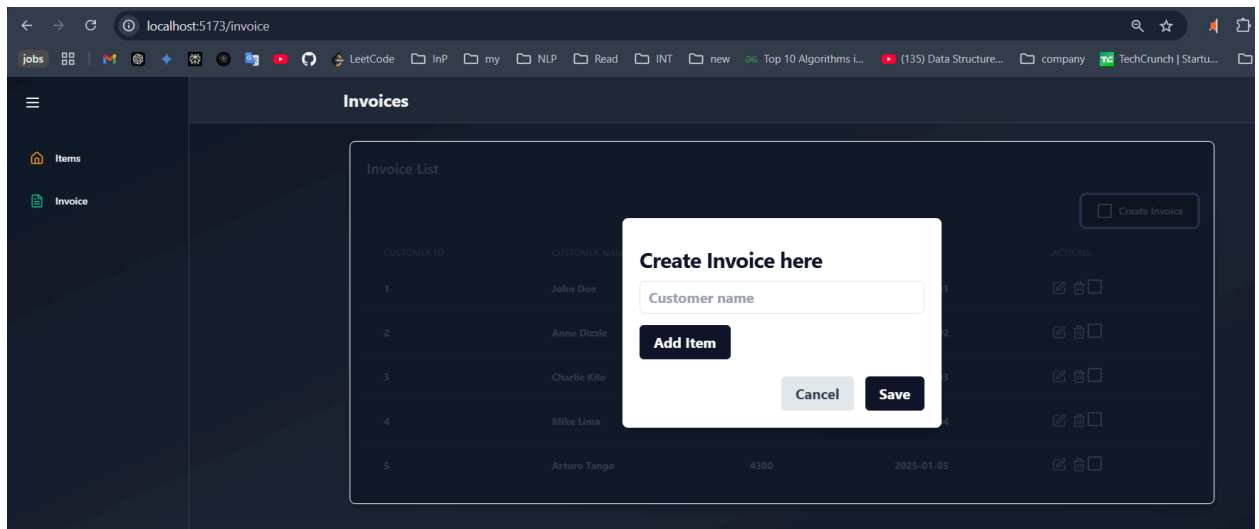

Invoices				
Invoice List				
CUSTOMER ID	CUSTOMER NAME	TOTAL BILL	DATE	ACTIONS
1	John Doe	10000	2025-01-01	✍ 🗑 📄
2	Anne Dizzle	5000	2025-01-02	✍ 🗑 📄
3	Charlie Kilo	2600	2025-01-03	✍ 🗑 📄
4	Mike Lima	5250	2025-01-04	✍ 🗑 📄
5	Arturo Tango	4300	2025-01-05	✍ 🗑 📄

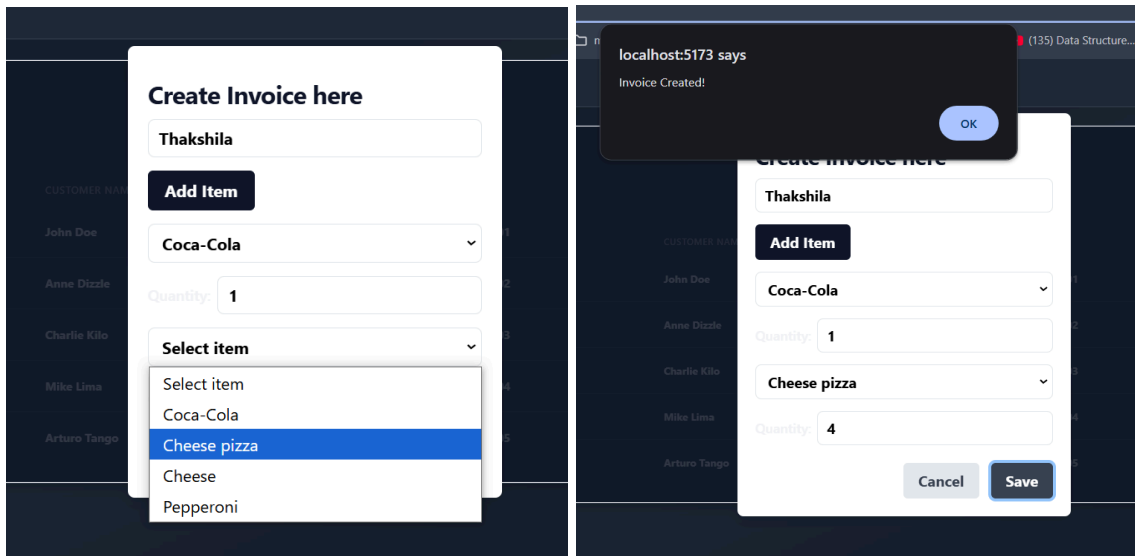

Functionalities

- CRUD Operations for Invoices:

Create: Add a new invoice.

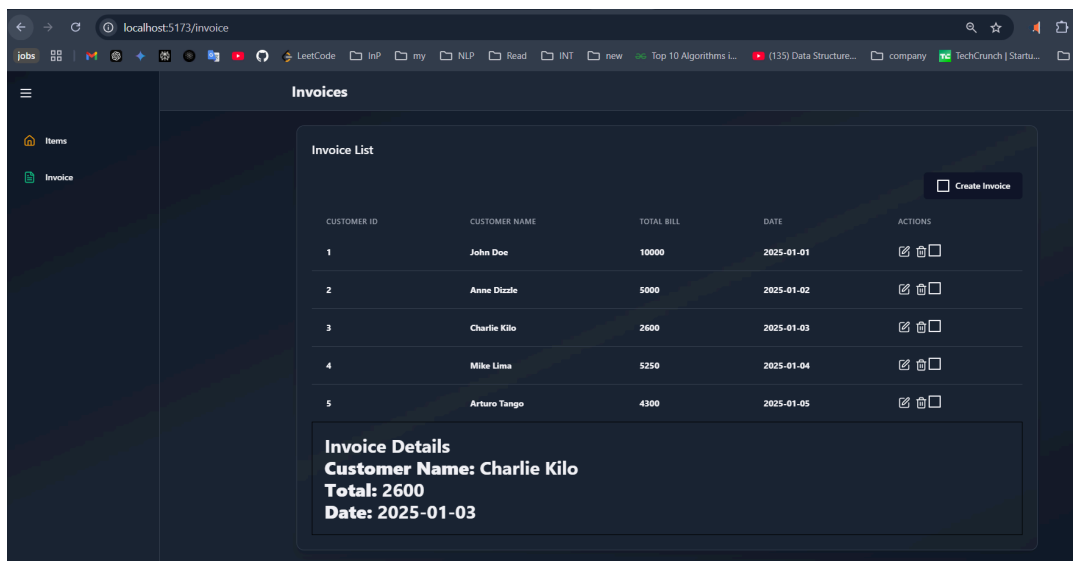

- Note that: Drop down listed only the previously added system available items

- If needed can add more items

Read: Display past invoices.

- Selected invoice (here ID 3) displayed below

Update/Delete: (depending on requirements).

- Invoice Details:

For a finalized single transaction or order

Items can belong to any category (pizza, toppings, beverages)

Display:

Item name

Quantity

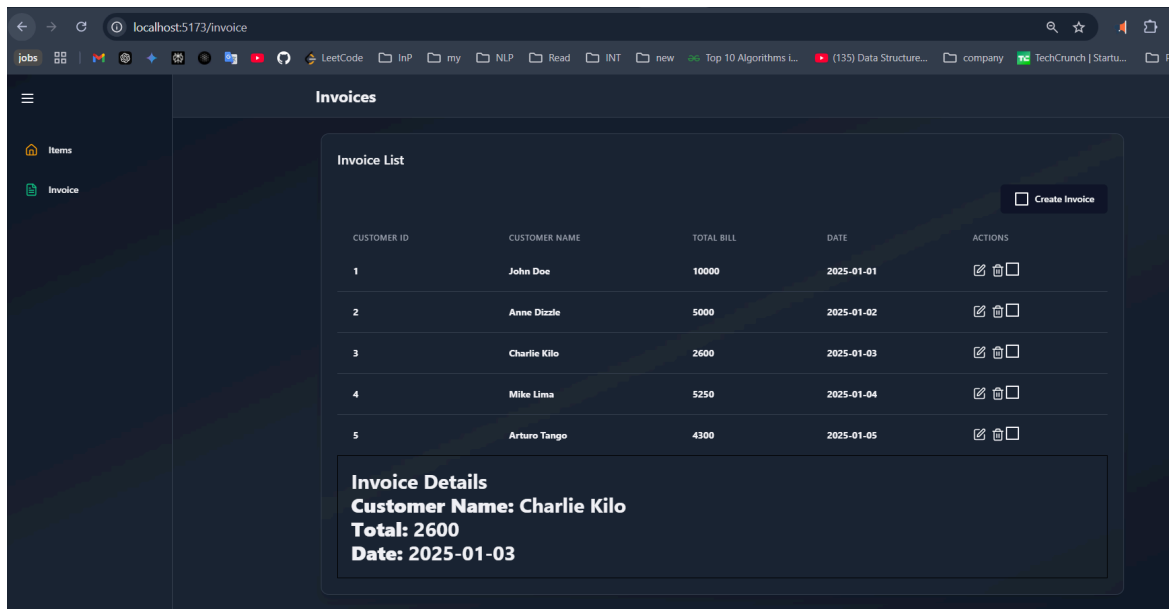

Unit price

Subtotal for each item Tax (calculated as a percentage of the subtotal)

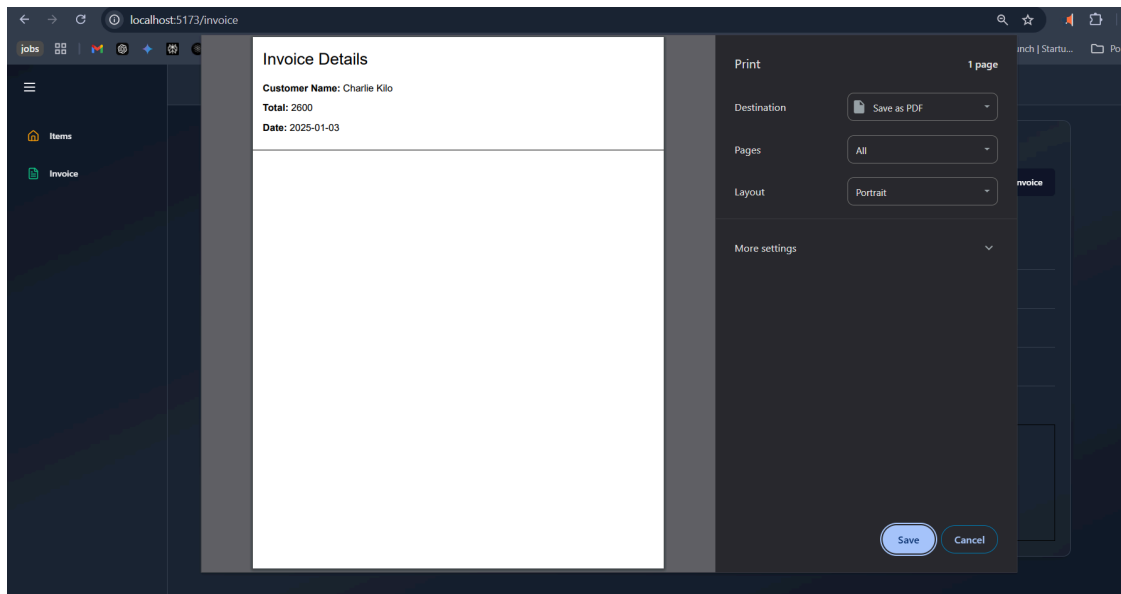

Total amount (subtotal + tax)

- Display Past Invoices:

Use a table/grid to show invoice history with a "View" button for details.

Include a "Print" button for each invoice. (square icon for each invoice in above image)

- Did using react-to-print library, used useRef hook

Implementing the MVC Components

Model

- Handles data operations and communication with the backend API (e.g., fetching, updating, deleting items).

`src/models/ItemModel.js`

Controller

- Handles user interactions and acts as the intermediary between the Model and the View.
- It calls the Model's methods to fetch/update data and passes the data to the View.

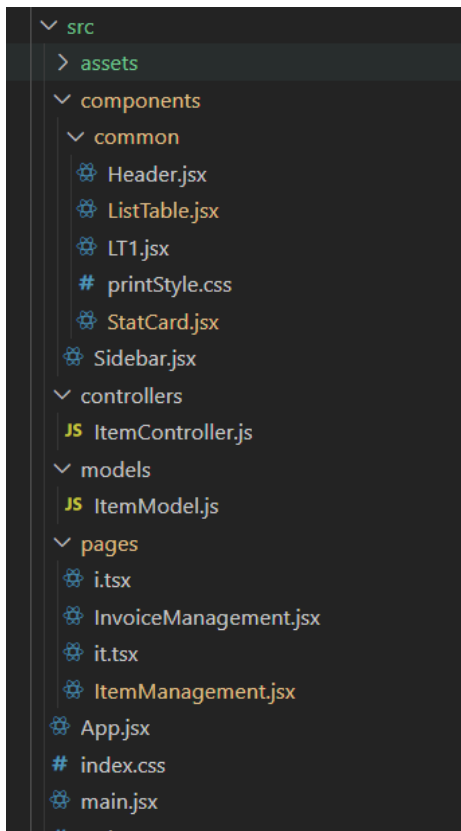

`src/controllers/ItemController.js`

View

-
- Represents the UI components. It only handles displaying data and capturing user input.

src/components/ItemList.jsx

Front end:

Backend:
